HEAT & COOL MODEL
(REVERSE CYCLE)
ROOM AIR CONDITIONER
WALL MOUNTED TYPE

Indoor Unit
ASTA24LCC
ASTA30LCC

Outdoor Unit
AOTR24LCC
AOTR30LCT

This Air Conditioner contains and operates with refrigerant R410A and Polyol Ester oil.

THIS PRODUCT MUST ONLY BE INSTALLED OR SERVICED BY QUALIFIED PERSONNEL.
Refer to Commonwealth, State, Territory and local legislation, regulations, codes, installation & operation manuals, before the installation, maintenance and/or service of this product.
SAFETY PRECAUTIONS

DANGER!

● Do not attempt to install this air conditioner by yourself.
● This unit contains no user-serviceable parts. Always consult authorized service personnel for repairs.
● When moving, consult authorized service personnel for disconnection and installation of the unit.
● Do not become excessively chilled by staying for lengthy periods in the direct cooling airflow.
● Do not insert fingers or objects into the outlet port or intake grilles.
● Do not start and stop air conditioner operation by disconnecting the power supply cord and so on.
● Take care not to damage the power supply cord.
● In the event of a malfunction (burning smell, etc.), immediately stop operation, disconnect the power supply plug, and consult authorized service personnel.

CAUTION!

● Provide occasional ventilation during use.
● Do not direct air flow at fireplaces or heating apparatus.
● Do not climb on, or place objects on, the air conditioner.
● Do not hang objects from the indoor unit.
● Do not set flower vases or water containers on top of air conditioners.
● Do not expose the air conditioner directly to water.
● Do not operate the air conditioner with wet hands.
● Do not pull power supply cord.
● Turn off power source when not using the unit for extended periods.
● Check the condition of the installation stand for damage.
● Do not place animals or plants in the direct path of the air flow.
● Do not drink the water drained from the air conditioner.
● Do not use in applications involving the storage of foods, plants or animals, precision equipment, or art works.
● Connection valves become hot during Heating; handle with care.
● Do not apply any heavy pressure to radiator fins.
● Operate only with air filters installed.
● Do not block or cover the intake grille and outlet port.
● Ensure that any electronic equipment is at least one metre away from either the indoor or outdoor units.
● Avoid installing the air conditioner near a fireplace or other heating apparatus.
● When installing the indoor and outdoor unit, take precautions to prevent access to infants.
● Do not use inflammable gases near the air conditioner.
FEATURES AND FUNCTIONS

**INVERTER**
At the start of operation, a large power is used to bring the room quickly to the desired temperature. Afterwards, the unit automatically switches to a low power setting for economic and comfortable operation.

**COIL DRY OPERATION**
The Indoor unit can be dried by pressing the COIL DRY button on the Remote Control Unit so as to avoid going moldy and restrain the breed of bacterium.

**AUTO CHANGEOVER**
The operation mode (cooling, dry, heating) is switched automatically to maintain the set temperature, and the temperature is kept constant at all times.

**PROGRAM TIMER**
The program timer allows you to integrate OFF timer and ON timer operations in a single sequence. The sequence can involve one transition from OFF timer to ON timer, or from ON timer to OFF timer, within a twenty-four hour period.

**SLEEP TIMER**
When the SLEEP button is pressed during Heating mode, the air conditioner's thermostat setting is gradually lowered during the period of operation; during cooling mode, the thermostat setting is gradually raised during the period of operation. When the set time is reached, the unit automatically turns off.

**WIRELESS REMOTE CONTROL UNIT**
The Wireless Remote Control Unit allows convenient control of air conditioner operation.

**HORIZONTAL AIRFLOW: COOLING/DOWNWARD AIRFLOW: HEATING**
For cooling, use horizontal airflow so the cool air does not blow directly on the occupants in the room. For heating, use downward airflow to send powerful, warm air to the floor and create a comfortable environment.

**OMNI-DIRECTIONAL AIR FLOW (SWING OPERATION)**
Three-dimensional control over air direction swing is possible through dual use of both an UP/DOWN air direction swing and RIGHT/LEFT air direction swing. Since UP/DOWN air direction flaps operate automatically according to the operating mode of the unit, it is possible to set air direction based on the operating mode.

**REMOVABLE OPEN PANEL**
The indoor unit's Open Panel can be removed for easy cleaning and maintenance.

**MILDEW-RESISTANT FILTER**
The AIR FILTER has been treated to resist mildew growth, thus allowing cleaner use and easier care.

**SUPER QUIET OPERATION**
When the FAN CONTROL button is used to select QUIET, the unit begins super-quiet operation; the indoor unit's airflow is reduced to produce quieter operation.

**POLYPHENOL CATECHIN AIR CLEANING FILTER**
The polyphenol catechin air cleaning filter uses static electricity to clean the air of fine particles and dust such as tobacco smoke and plant pollen that are too small to see. The filter contains catechin, which is highly effective against various bacteria by suppressing the growth of the bacteria adsorbed by the filter. Note that when the air cleaning filter is installed, the amount of air produced decreases, causing a slight decrease in the air conditioner's performance.

**NEGATIVE AIR IONS DEODORIZING FILTER**
It comprises pottery super micro particles, which can produce negative air ions having the effect of deodorizing and can absorb and remit the peculiar smell at home.
To facilitate explanation, the accompanying illustration has been drawn to show all possible indicators; in actual operation, however, the display will only show those indicators appropriate to the current operation.
Fig. 6 Remote Control Unit

- SLEEP button
- MASTER CONTROL button
- SET TEMP. button (▲ / ▼)
- COIL DRY button
- Signal Transmitter
- TIMER MODE button
- TIMER SET (싼 / 싸 ) button
- FAN CONTROL button
- START/STOP button
- SET button (Vertical)
- SET button (Horizontal)
- SWING button
- RESET button
- TEST RUN button

- This button is used when installing the conditioner, and should not be used under normal conditions, as it will cause the air conditioner's thermostat function to operate incorrectly.
- If this button is pressed during normal operation, the unit will switch to test operation mode, and the Indoor Unit's OPERATION Indicator Lamp and TIMER Indicator Lamp will begin to flash simultaneously.
- To stop the test operation mode, press the START/STOP button to stop the air conditioner.

Fig. 5 Outdoor Unit

- Intake Port
- Outlet Port
- Pipe Unit
- Drain port (bottom)
Load Batteries (R03/LR03 x 2)

1. Press and slide the battery compartment lid on the reverse side to open it.
   Slide in the direction of the arrow while pressing the [ mark.

2. Insert batteries.
   Be sure to align the battery polarities (+/-) correctly.

3. Close the battery compartment lid.

Set the Current time

1. Press the CLOCK ADJUST button (Fig. 6 ④).
   Use the tip of a ball-point pen or other small object to press the button.

2. Use the TIMER SET ( / ) buttons (Fig. 6 ⑤) to adjust the clock to the current time.
   - [ button: Press to advance the time.
   - [ button: Press to reverse the time.

   (Each time the buttons are pressed, the time will be advanced/reversed in one-minute increments; hold the buttons depressed to change the time quickly in ten-minute increments.)

3. Press the CLOCK ADJUST button (Fig. 6 ④) again.
   This completes the time setting and starts the clock.

To Use the Remote Control Unit

- The Remote Control Unit must be pointed at signal receiver (Fig. 1 ④) to operate correctly.
- Operating Range: About 7 meters.
- When a signal is properly received by the air conditioner, a beeping sound will be heard.
- If no beep is heard, press the Remote Control Unit button again.

Remote Control Unit Holder

1. Mount the Holder.
2. Set the Remote Control Unit.
3. To remove the Remote Control Unit (when use at hand).

CAUTION!

- Take care to prevent infants from accidentally swallowing batteries.
- When not using the Remote Control Unit for an extended period, remove the batteries to avoid possible leakage and damage to the unit.
- If leaking battery fluid comes in contact with your skin, eyes, or mouth, immediately wash with copious amounts of water, and consult your physician.
- Dead batteries should be removed immediately and disposed of properly, either in a battery collection receptacle or to the appropriate authority.
- Do not attempt to recharge dry batteries.

Never mix new and used batteries, or batteries of different types. Batteries should last about one year under normal use. If the Remote Control Unit's operating range becomes appreciably reduced, replace the batteries and press the RESET button with the tip of a ballpoint pen or other small object.
**OPERATION**

**To Select Mode Operation**

1. **Press the START/STOP button (Fig. 6 📧).**
   The indoor unit’s OPERATION Indicator Lamp (red) (Fig. 3 📧) will light.
   The air conditioner will start operating.

2. **Press the MASTER CONTROL button (Fig. 6 📧) to select the desired mode.**
   Each time the button is pressed, the mode will change in the following order.
   ```
   AUTO → COOL → DRY → HEAT → FAN
   ```
   About three seconds later, the entire display will reappear.

**To Set the Thermostat**

Press the SET TEMP. button (Fig. 6 📧).

- **button**: Press to raise the thermostat setting.
- **button**: Press to lower the thermostat setting.

**Thermostat setting range:**

- **AUTO** ................. 18-30 °C
- **Heating** ................. 16-30 °C
- **Cooling/Dry** ............. 18-30 °C

The thermostat cannot be used to set room temperature during the FAN mode (the temperature will not appear on the Remote Control Unit’s Display).

About three seconds later, the entire display will reappear.

The thermostat setting should be considered a standard value, and may differ somewhat from the actual room temperature.

**To Set the Fan Speed**

Press the FAN CONTROL button (Fig. 6 📧).

Each time the button is pressed, the fan speed changes in the following order:

```
AUTO → HIGH → MED → LOW → QUIET
```

About three seconds later, the entire display will reappear.

**When set to AUTO:**

- **Heating**: Fan operates so as to optimally circulate warmed air.
  However, the fan will operate at very low speed when the temperature of the air issued from the indoor unit is low.

- **Cooling**: As the room temperature approaches that of the thermostat setting, the fan speed becomes slower.

- **Fan**: The fan runs at the low fan speed.

The fan will operate at a very low setting during Monitor operation and at the start of the Heating mode.

**SUPER QUIET Operation**

**When set to Quiet:**

SUPER QUIET operation begins. The indoor unit’s airflow will be reduced for quieter operation.

- **SUPER QUIET operation cannot be used during Dry mode. (The same is true when dry mode is selected during AUTO mode operation.)**

- **During Super Quiet operation, Heating and Cooling performance will be reduced somewhat. If the room does not warm up/cool down when using SUPER QUIET Operation, please adjust the air conditioner’s Fan Speed.**
### To Stop Operation

**Press the START/STOP button (Fig. 6).**

The OPERATION Indicator Lamp (red) (Fig. 3) will go out.

### About AUTO CHANGEOVER Operation

**AUTO:**
- When AUTO CHANGEOVER operation first selected, the fan will operate at very low speed for about one minute, during which time the unit detects the room conditions and selects the proper operating mode.

If the difference between thermostat setting and actual room temperature is more than +2 °C → Cooling or dry operation

If the difference between thermostat setting and actual room temperature is within ±2 °C → Monitor operation

If the difference between thermostat setting and actual room temperature is more than –2 °C → Heating operation

- When the air conditioner has adjusted your room's temperature to near the thermostat setting, it will begin monitor operation. In the monitor operation mode, the fan will operate at low speed. If the room temperature subsequently changes, the air conditioner will once again select the appropriate operation (Heating, Cooling) to adjust the temperature to the value set in the thermostat.

  (The monitor operation range is ±2 °C relative to the thermostat setting.)

- If the mode automatically selected by the unit is not what you wish, select one of the mode operation (HEAT, COOL, DRY, FAN).

### About Mode Operation

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Heating:</strong></td>
<td>Use to warm your room.</td>
</tr>
<tr>
<td>-</td>
<td>When Heating mode is selected, the air conditioner will operate at very low fan speed for about 3 to 5 minutes, after which it will switch to the selected fan setting. This period of time is provided to allow the indoor unit to warm up before begin full operation.</td>
</tr>
<tr>
<td>-</td>
<td>When the room temperature is very low, frost may form on the outside unit, and its performance may be reduced. In order to remove such frost, the unit will automatically enter the defrost cycle from time to time. During Automatic Defrosting operation, the OPERATION Indicator Lamp (Fig. 3) will flash, and the heat operation will be interrupted.</td>
</tr>
<tr>
<td>-</td>
<td>After the start of heating operation, it takes some time before the room gets warmer.</td>
</tr>
<tr>
<td><strong>Cooling:</strong></td>
<td>Use to cool your room.</td>
</tr>
<tr>
<td><strong>Dry:</strong></td>
<td>Use for gently cooling while dehumidifying your room.</td>
</tr>
<tr>
<td>-</td>
<td>You cannot heat the room during Dry mode.</td>
</tr>
<tr>
<td>-</td>
<td>During Dry mode, the unit will operate at low speed; in order to adjust room humidity, the indoor unit's fan may stop from time to time. Also, the fan may operate at very low speed when adjusting room humidity.</td>
</tr>
<tr>
<td>-</td>
<td>The fan speed cannot be changed manually when Dry mode has been selected.</td>
</tr>
<tr>
<td><strong>Fan:</strong></td>
<td>Use to circulate the air throughout your room.</td>
</tr>
</tbody>
</table>

---

**During Heating mode:**
Set the thermostat to a temperature setting that is higher than the current room temperature. The Heating mode will not operate if the thermostat is set lower than the actual room temperature.

**During Cooling/Dry mode:**
Set the thermostat to a temperature setting that is lower than the current room temperature. The Cooling and Dry modes will not operate if the thermostat is set higher than the actual room temperature (in Cooling mode, the fan alone will operate).

**During Fan mode:**
You can not use the unit to heat and cool your room.
Before using the timer function, be sure that the Remote Control Unit is set to the correct current time (☞ P. 5).

### To Use the ON timer or OFF timer

1. Press the START/STOP button (Fig. 6 ☊) (if the unit is already operating, proceed to step 2). The indoor unit’s OPERATION Indicator Lamp (red) (Fig. 3 ☊) will light.

2. Press the TIMER MODE button (Fig. 6 ☊) to select the OFF timer or ON timer operation.
   Each time the button is pressed the timer function changes in the following order:
   
   ![Diagram](LOGO.png)

   The indoor unit’s green TIMER Indicator Lamp (Fig. 3 ☊) will light.

3. Use the TIMER SET buttons (Fig. 6 ☊) to adjust the desired OFF time or ON time.
   Set the time while the time display is flashing (the flashing will continue for about five seconds).

   - ▲ button: Press to advance the time.
   - ▼ button: Press to reverse the time.

   About five seconds later, the entire display will reappear.

### To Use the Program timer

1. Press the START/STOP button (Fig. 6 ☊). (if the unit is already operating, proceed to step 2) The indoor unit’s OPERATION Indicator Lamp (red) (Fig. 3 ☊) will light.

2. Set the desired times for OFF timer and ON timer.
   See the section “To Use the ON timer or OFF timer” to set the desired mode and times.
   About three seconds later, the entire display will reappear.
   The indoor unit’s TIMER Indicator Lamp (green) (Fig. 3 ☊) will light.

3. Press the TIMER MODE button (Fig. 6 ☊) to select the PROGRAM timer operation (OFF → ON or OFF ← ON will display).
   The display will alternately show “OFF timer” and “ON timer”, then change to show the time setting for the operation to occur first.
   - The program timer will begin operation. (If the ON timer has been selected to operate first, the unit will stop operating at this point.)
   About five seconds later, the entire display will reappear.

### About the Program timer

- The program timer allows you to integrate OFF timer and ON timer operations in a single sequence. The sequence can involve one transition from OFF timer to ON timer, or from ON timer to OFF timer, within a twenty-four hour period.
- The first timer function to operate will be the one set nearest to the current time. The order of operation is indicated by the arrow in the Remote Control Unit’s Display (OFF → ON, or OFF ← ON).
- One example of Program timer use might be to have the air conditioner automatically stop (OFF timer) after you go to sleep, then start (ON timer) automatically in the morning before you arise.

### To Cancel the Timer

Use the TIMER button to select “CANCEL”. The air conditioner will return to normal operation.

### To Change the Timer Settings

1. Follow the instructions given in the section “To Use the ON timer or OFF timer” to select the timer setting you wish to change.
   2. Press the TIMER MODE button to select either OFF → ON or OFF ← ON.

### To Stop Air Conditioner Operation while the Timer is Operating

Press the START/STOP button.

### To Change Operating Conditions

If you wish to change operating conditions (Mode, Fan Speed, Thermostat Setting, SUPER QUIET mode), after making the timer setting wait until the entire display reappears, then press the appropriate buttons to change the operating condition desired.
SLEEP TIMER OPERATION

Unlike other timer functions, the SLEEP timer is used to set the length of time until air conditioner operate is stopped.

To Use the SLEEP Timer

While the air conditioner is operating or stopped, press the SLEEP button (Fig. 6 ②).
The indoor unit’s OPERATION Indicator Lamp (red) (Fig. 3 ⑤) lights and the TIMER Indicator Lamp (green) (Fig. 3 ⑥) light.

To Change the Timer Settings

Press the SLEEP button (Fig. 6 ②) once again and set the time using the TIMER SET (  /  ) buttons (Fig. 6 ⑥).
Set the time while the Timer Mode Display is flashing (the flashing will continue about five seconds).

button: Press to advance the time.
button: Press to reverse the time.
About five seconds later, the entire display will reappear.

About the SLEEP Timer

To prevent excessive warming or cooling during sleep, the SLEEP timer function automatically modifies the thermostat setting in accordance with the set time setting. When the set time has elapsed, the air conditioner completely stops.

During Heating operation:
When the SLEEP timer is set, the thermostat setting is automatically lowered 1 °C every thirty minutes. When the thermostat has been lowered a total of 4 °C, the thermostat setting at that time is maintained until the set time has elapsed, at which time the air conditioner automatically turns off.

During Cooling/Dry operation:
When the SLEEP timer is set, the thermostat setting is automatically raised 1 °C every sixty minutes. When the thermostat has been raised a total of 2 °C, the thermostat setting at that time is maintained until the set time has elapsed, at which time the air conditioner automatically turns off.

MANUAL AUTO OPERATION

Use the MANUAL AUTO operation in the event the Remote Control Unit is lost or otherwise unavailable.

How To Use the Main Unit Controls

Press the MANUAL AUTO button (Fig. 2 ②) on the main unit control panel.
To stop operation, press the MANUAL AUTO button (Fig. 2 ②) once again.
(Controls are located inside the Open Panel)
ADJUSTING THE DIRECTION OF AIR CIRCULATION

● Adjust the up, down, left, and right AIR directions with the AIR DIRECTION buttons on the Remote Control Unit.
● Use the AIR DIRECTION buttons after the Indoor Unit has started operating and the airflow-direction louvers have stopped moving.

**Vertical Air Direction Adjustment**

**Press the SET button (Vertical) (Fig. 6).**

Each time the button is pressed, the air direction range will change as follows:

1. 2. 3. 4. 5. 6.

**Types of Airflow Direction Setting:**

1. 2. 3.: During Cooling/Dry modes
4. 5. 6.: During Heating mode

The Remote Control Unit's display does not change.

● Use the air direction adjustments within the ranges shown above.
● The vertical airflow direction is set automatically as shown, in accordance with the type of operation selected.
  - During Cooling/Dry mode: Horizontal flow 1
  - During Heating mode: Downward flow 5

● During AUTO mode operation, for the first minute after beginning operation, airflow will be horizontal 1; the air direction cannot be adjusted during this period.
● Direction 1  2

Only the direction of the Air Flow Direction Louver changes; the direction of the Power Diffuser does not change.

**Horizontal Air Direction Adjustment**

**Press the SET button (Horizontal) (Fig. 6).**

● Each time the button is pressed, the air direction range will change as follows:

1. 2. 3. 4. 5.

The remote control unit’s display does not change.

**DANGER!**

● Never place fingers or foreign objects inside the outlet ports, since the internal fan operates at high speed and could cause personal injury.

● Always use the Remote Control Unit's SET button to adjust the vertical airflow louvers. Attempting to move them manually could result in improper operation; in this case, stop operation and restart. The louvers should begin to operate properly again.

● During use of the Cooling and Dry modes, do not set the Air Flow Direction Louvers in the Heating range (4 - 6) for long periods of time, since water vapor may condense near the outlet louvers and drops of water may drip from the air conditioner. During the Cooling and Dry modes, if the Air Flow Direction Louvers are left in the heating range for more than 30 minutes, they will automatically return to position 3.

● When used in a room with infants, children, elderly or sick persons, the air direction and room temperature should be considered carefully when making settings.
SWING OPERATION

Begin air conditioner operation before performing this procedure.

To select SWING Operation

Press the SWING button (Fig. 6 irection.

The SWING Display (Fig. 7 irection.) will light.

Each time the SWING button is pressed, the swing operation will change in the following order.

- Up/down swing operation
- Left/right swing operation
- Swing operation stops
- Up/down/left/right swing operation

To stop SWING Operation

Press the SWING button and select STOP.

Airflow direction will return to the setting before swing was begun.

About Swing Operation

- Up/down swing: Swing operation begins using the following range according to the current airflow direction.
  - Airflow direction is 1–4 (for cooling, dry).
    - With the upper airflow-direction louver in the horizontal position, the lower airflow-direction louver moves (swings) to direct airflow to a wide area.
  - Airflow direction is 3–6 (for heating).
    - With the airflow-direction louvers set for downward or straight down airflow, airflow is directly mainly at the floor.

- Left/right swing: The airflow-direction louvers move (swing) in the left/right airflow direction.

- Up/down/left/right swing: The airflow-direction louvers move (swing) in both the up/down and left/right airflow directions.

- The SWING operation may stop temporarily when the air conditioner’s fan is not operating, or when operating at very low speeds.

- If the SET button (Vertical) is pressed during the up/down swing operation, the up/down swing operation will stop and if the SET button (Horizontal) is pressed during the left/right swing operation, the left/right swing operation will stop.

COIL DRY OPERATION

The Indoor unit can be dried by pressing the COIL DRY button on the Remote Control Unit so as to avoid going moldy and restrain the breed of bacterium.

The COIL DRY Operation will operate for 20 minutes after pressing the COIL DRY button and it will stop automatically.

To select COIL DRY Operation

Press the COIL DRY button (Fig. 6) during operation or when it stops.

The COIL DRY Display (Fig. 7) will light. Then it will disappear after 20 minutes.

To cancel COIL DRY Operation

Press the START/STOP button (Fig. 6) during COIL DRY Operation.

The COIL DRY Display (Fig. 7) will go out. Then the operation stops.

About COIL DRY Operation

- Press the COIL DRY button again during COIL DRY Operation, COIL DRY Operation can be reset.

- The COIL DRY Operation cannot get rid of the existed mould or bacterium, and it has no sterilization effect either.
Cleaning the Intake Grille

1. Remove the Intake Grille.
   ① Place your fingers at both lower ends of the grille panel, and lift forward; if the grille seems to catch partway through its movement, continue lifting upward to remove.
   ② Pull past the intermediate catch and open the Intake Grille wide so that it become horizontal.

2. Clean with water.
   Remove dust with a vacuum cleaner; wipe the unit with warm water, then dry with a clean, soft cloth.

3. Replace the Intake Grille.
   ① Pull the knobs all the way.
   ② Hold the grille horizontal and set the left and right mounting shafts into the bearings at the top of the panel.
   ③ Press the place where the arrow on the diagram indicates and close the Intake Grille.

Cleaning the Air Filter

1. Open the Intake Grille, and remove the air filter.
   Lift up the air filter’s handle, disconnect the two lower tabs, and pull out.

2. Remove dust with a vacuum cleaner or by washing.
   After washing, allow to dry thoroughly in a shaded place.

3. Replace the Air Filter and close the Intake Grille.
   ① Align the sides of the air filter with the panel, and push in fully, making sure the two lower tabs are returned properly to their holes in the panel.
   ② Close the Intake Grille.

(For purposes of example, the illustration shows the unit without Intake Grille installed.)

● Dust can be cleaned from the air filter either with a vacuum cleaner, or by washing the filter in a solution of mild detergent and warm water. If you wash the filter, be sure to allow it to dry thoroughly in a shady place before reinstalling.
● If dirt is allowed to accumulate on the air filter, air flow will be reduced, lowering operating efficiency and increasing noise.
● During periods of normal use, the Air Filters should be cleaned every two weeks.

● When used for extended periods, the unit may accumulate dirt inside, reducing its performance. We recommend that the unit be inspected regularly, in addition to your own cleaning and care. For more information, consult authorized service personnel.
● When cleaning the unit’s body, do not use water hotter than 40 °C, harsh abrasive cleansers, or volatile agents like benzene or thinner.
● Do not expose the unit body to liquid insecticides or hairsprays.
● When shutting down the unit for one month or more, first allow the fan mode to operate continuously for about one-half day to allow internal parts to dry thoroughly.
Air Cleaning Filter Installation

1. Open the Intake Grille and remove the Air filters.

![Air Filter (Right & Left)](image)

2. Install the Air cleaning filter set (set of 2).

1. Set the air cleaning filter into the air cleaning filter frame.

![Air cleaning filter set](image)

2. Engage the latch at both ends of the filter with the two hooks at the rear of the air cleaning filter frame.

![Air cleaning filter](image)

![Hook (2 places at the rear)](image)

Latch (2 places)

Take care that the air cleaning filter does not project beyond the frame.

3. Engage the four fixing locations at the top and bottom of the air cleaning filter frame with the hooks of the air filter.

![Rear of the filter](image)

Fixing location, hook (6 places)

3. Install the two Air filters and close the Intake Grille.

![Air Filter(Right & Left)](image)

- When air cleaning filters are used, the effect will increased by setting the fan speed to “High”.

Replacing dirty Air cleaning filters

Replace filters with the following components (purchased separately).

- POLYPHENOL CATECHIN AIR CLEANING FILTER: UTR-FA13-1
- Negative air ions deodorizing filter: UTR-FA13-2

1. Open the Intake Grille and remove the Air filters.

![Air Filter (Right & Left)](image)

2. Replace them by two new Air cleaning filters.

1. Remove the old Air cleaning filters in reverse order of their installation.

2. Install in the same way as for installation of the air cleaning filter set.

3. Install the two Air filters and close the Intake Grille.

In regard to the Air Cleaning Filters

POLYPHENOL CATECHIN AIR CLEANING FILTER (one sheet)

- The Air Cleaning Filters are disposable filters. (They can not be washed and reused.)
- For storage of the Air Cleaning Filters, use the filters as soon as possible after the package has been opened. (The air cleaning effect decreases when the filters are left in the opened package)
- Generally, the filters should be exchanged about every three months.

Please buy dedicated air cleaning filters (UTR-FA13-1) (Sold separately) to exchange the used dirty air cleaning filters.

[Negative air ions deodorizing filter (one sheet) — light blue]

- The filters should be exchanged about every three years so as to maintain the deodorizing effect.
- Filter frame is not a one-off product.

Please buy dedicated deodorizing filter (UTR-FA13-2) (Sold separately) when exchanging the filters.

Maintenance of Deodorizing Filters

In order to maintain the deodorizing effect, please clean the filter in the follow way once three months.

1. Remove the deodorizing filter.

2. Clean with water and dry in the air.

   1) Flush the filters with high-pressure hot water until the surface of the filters are covered with water. Please flush with diluent neutral detergent. Never wash by reaming or rubbing, otherwise it will damage the deodorizing effect.
   2) Rinse with water flow.
   3) Dry in shade.

3. Reinstall the deodorizing filter.
### TROUBLESHOOTING

**WARNING!**

In the event of a malfunction (burning smell, etc.), immediately stop operation, turn off the electrical breaker or disconnect the power supply plug, and consult authorized service personnel. Merely turning off the unit’s power switch will not completely disconnect the unit from the power source. Always be sure to turn off the electrical breaker or disconnect the power supply plug to ensure that power is completely off.

Before requesting service, perform the following checks:

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Problem</th>
<th>See Page</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NORMAL FUNCTION</strong></td>
<td>Doesn’t operate immediately:</td>
<td><img src="image_url" alt="Image" /></td>
</tr>
<tr>
<td>Noise is heard:</td>
<td>● During operation and immediately after stopping the unit, the sound of water flowing in the air conditioner’s piping may be heard. Also, noise may be particularly noticeable for about 2 to 3 minutes after starting operation (sound of coolant flowing).</td>
<td><img src="image_url" alt="Image" /></td>
</tr>
<tr>
<td>Smells:</td>
<td>● Some smell may be emitted from the indoor unit. This smell is the result of room smells (furniture, tobacco, etc.) which have been taken into the air conditioner.</td>
<td><img src="image_url" alt="Image" /></td>
</tr>
<tr>
<td>Mist or steam are emitted:</td>
<td>● During Cooling or Dry operation, a thin mist may be seen emitted from the indoor unit. This results from the sudden Cooling of room air by the air emitted from the air conditioner, resulting in condensation and misting.</td>
<td><img src="image_url" alt="Image" /></td>
</tr>
<tr>
<td>Airflow is weak or stops:</td>
<td>● When Heating operation is started, fan speed is temporarily very low, to allow internal parts to warm up.</td>
<td><img src="image_url" alt="Image" /></td>
</tr>
<tr>
<td></td>
<td>● During Heating operation, if the room temperature rises above the thermostat setting, the outdoor unit will stop, and the indoor unit will operate at very low fan speed. If you wish to warm the room further, set the thermostat for a higher setting.</td>
<td><img src="image_url" alt="Image" /></td>
</tr>
<tr>
<td></td>
<td>● During Heating operation, the unit will temporarily stop operation (between 7 and 15 minutes) as the Automatic Defrosting mode operates. During Automatic Defrosting operation, the OPERATION Indicator Lamp will flash.</td>
<td><img src="image_url" alt="Image" /></td>
</tr>
<tr>
<td></td>

TROUBLESHOOTING

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Items to check</th>
<th>See Page</th>
</tr>
</thead>
</table>
| Doesn’t operate at all: | ● Is the Power Supply Plug disconnected its outlet?  
● Has there been a power failure?  
● Has a fuse blown out, or a circuit breaker been tripped? | — |
| ● Is the timer operating? | 8 - 9 |
| Poor Cooling performance: | ● Is the Air Filter dirty?  
● Air the air conditioner’s intake grille or outlet port blocked?  
● Did you adjust the room temperature settings (thermostat) correctly?  
● Is there a window or door open?  
● In the case of Cooling operation, is a window allowing bright sunlight to enter? (Close the curtains.)  
● In the case of Cooling operation, are there heating apparatus and computers inside the room, or are there too many people in the room? | — |
| The unit operates differently from the Remote Control Unit’s setting: | ● Are the Remote Control Unit’s batteries dead?  
● Are the Remote Control Unit’s batteries loaded properly? | 5 |
| ● Is the unit set for SUPER QUIET operation? | 6 |

If the problem persists after performing these checks, or if you notice burning smells, or both the OPERATION Indicator Lamp (Fig. 3 5) and the TIMER Indicator Lamp (Fig. 3 6) flashes, or only the TIMER Indicator Lamp (Fig. 3 6) flashes, immediately stop operation, disconnect the Power Supply, and consult authorized service personnel.

OPERATING TIPS

Operation and Performance

Heating Performance
● This air conditioner operates on the heat-pump principle, absorbing heat from outdoor air and transferring that heat indoors. As a result, the operating performance is reduced as outdoor air temperature drops. If you feel that insufficient heating performance is being produced, we recommend you use this air conditioner in conjunction with another kind of heating appliance.

● Heat-pump air conditioners heat your entire room by recirculating air throughout the room, with the result that some time may be required after first starting the air conditioner until the room is heated.

Microcomputer-controlled Automatic Defrosting
● When using the Heating mode under conditions of low outdoor temperature and high humidity, frost may form on the outdoor unit, resulting in reduced operating performance.

In order to prevent this kind of reduced performance, this unit is equipped with a Microcomputer-controlled Automatic Defrosting function. If frost forms, the air conditioner will temporarily stop, and the defrosting circuit will operate briefly (for about 7-15 minutes).

During Automatic Defrosting operation, the OPERATION Indicator Lamp (red) will flash.

AUTO Restart

In Event of Power Interruption

● The air conditioner power has been interrupted by a power failure. The air conditioner will then restart automatically in its previous mode when the power is restored.

● Operated by setting before the power failure.

● If a power failure occurs during TIMER operation, the timer will be reset and the unit will begin (or stop) operation at the new time setting. In the event that this kind of timer fault occurs the TIMER Indicator Lamp will flash (see Page. 4).

● Use of other electrical appliances (electric shaver, etc.) or nearby use of a wireless radio transmitter may cause the air conditioner to malfunction. In this event, temporarily disconnect the Power Supply Plug, reconnect it, and then use the Remote Control Unit to resume operation.
OPERATING TIPS

Temperature and Humidity Range

- If the air conditioner is used under higher temperature conditions than those listed, the built-in protection circuit may operate to prevent internal circuit damage. Also, during Cooling and Dry modes, if the unit is used under conditions of lower temperature than those listed above, the heat-exchanger may freeze, leading to water leakage and other damage.
- Do not use this unit for any purposes other than the Cooling, Dehumidifying, and air-circulation of rooms in ordinary dwellings.
- If the unit is used for long periods under high-humidity conditions, condensation may form on the surface of the indoor unit, and drip onto the floor or other objects underneath. (About 80% or more).
- If the outdoor temperature is lower than the temperature scope in the list above, in order to keep safety operation of device, the outdoor unit may stop operation for certain period of time.
